

1. **Q.** Additional task to task B at the request of the CIO: Design for implementation of Cisco StealthWatch, Cisco Identity Services Engine (ISE), and Cisco firepower management center configurations with existing network equipment.

Does the additional task to task B apply to all 8 CIs?

A. Yes, additional task applies to all 8 OKI, as well as all the other tasks.

2. **Q.**

- Is physical presence at the Recipient's individual facilities a mandatory requirement for project implementation? The experience of implementing similar projects shows that all project tasks can be completed online. The only exception may be an inspection of the Recipient's main Data Centre, and this is not always possible. - **Physical presence is desirable but not mandatory, especially given the need to ensure physical security of contractor personnel.**
- Since the project provides for 8 separate reports for each of the stages, how do you plan to communicate with individual facilities? Are these separate facilities independent of each other, will each have its own responsible person, will it be necessary to sign a separate NDA with each facility, and will each facility have an individual presentation? - **We do not have any separate requirements; however, all facilities are subordinate to the central office of the Administration of Sea Ports of Ukraine.**
- If you confirm in clause 2 that these are independent facilities, then we don't include in the labour costs a single consolidated report for the Administration for all 8 separate facilities. - **These are structural units within one organization.**
- Since the timeframe for the entire project is very tight, in case of delays on the part of any of the 8 individual sites, how will this affect the overall project delivery date? - **The date is unchanged**
